

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1-4. (Canceled).

5. (Currently Amended) A method of manufacturing a an active matrix light emitting device, comprising:

forming a red luminous layer comprising a first luminous material and a dopant over a substrate by evaporation; ~~and~~

forming a green luminous layer comprising the first luminous material over the red luminous layer by stopping the evaporation of the dopant while continuing the evaporation of the first luminous material;

forming a blue luminous layer comprising a second luminous material to be overlapped with the red luminous layer and the green luminous layer; and

forming a hole injection layer comprising a conductive polymer,  
wherein white light is obtained by a mixture of red light, green light and blue light emitted from the red luminous layer, the green luminous layer and the blue luminous layer, respectively.

6. (Currently Amended) A method of manufacturing a an active matrix light emitting device, comprising:

forming a green luminous layer comprising a first luminous material over a substrate by evaporation; ~~and~~

forming a red luminous layer over the green luminous layer comprising the first luminous material and a dopant by evaporating the dopant while continuing the evaporation of the first luminous material;

forming a blue luminous layer comprising a second luminous material to be overlapped with the red luminous layer and the green luminous layer; and

forming a hole injection layer comprising a conductive polymer,

wherein white light is obtained by a mixture of red light, green light and blue light emitted from the red luminous layer, the green luminous layer and the blue luminous layer, respectively.

7-17. (Canceled).

18. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 5, wherein the first luminous material is Alq<sub>3</sub> (tris-8-quinolilite-aluminum complex).

19. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 6, wherein the first luminous material is Alq<sub>3</sub> (tris-8-quinolilite-aluminum complex).

20-22. (Canceled).

23. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 5, wherein the dopant is an organic material by which fluorescence can be obtained.

24. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 6, wherein the dopant is an organic material by which fluorescence can be obtained.

25-27. (Canceled).

28. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 5, wherein the dopant is an organic material by which phosphorescence can be obtained.

29. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 6, wherein the dopant is an organic material by which phosphorescence can be obtained.

30-32. (Canceled).

33. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 5, wherein said active matrix light emitting device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, a sound reproduction system, a notebook type personal computer, a game apparatus, a portable information terminal, and an image playback device.

34. (Currently Amended) A method of manufacturing a an active matrix light emitting device according to claim 6, wherein said active matrix light emitting device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, a sound reproduction system, a notebook type
